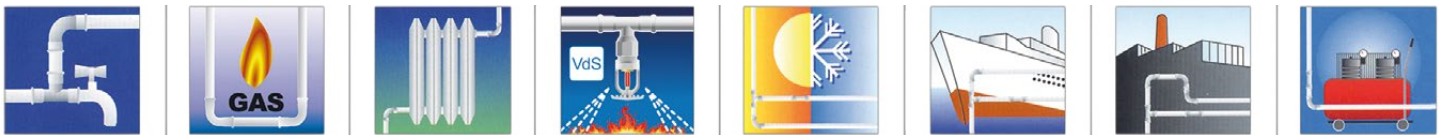
High performance installations.



STAINLESS STEEL AISI 316L

Ø 12 mm - Ø 108 mm

Ø 15 mm - Ø 54 mm

Eurotubi Pressfitting System in AISI 316L stainless steel is the ideal solution for the installation of drinking and sanitary water systems, as the superior grade of this material guarantees high hygienic properties. Thanks to its good resistance to corrosion, it's also suitable for heating, air conditioning, refrigeration, compressed air, fire sprinkler protection systems and in all the situations where there are relatively harsher operating conditions.
The product is approved by numerous international certification authorities, including the German certifications DVGW W534 for drinking water and VdS for fire sprinkler systems.

STAINLESS STEEL AISI 304

Ø 15 mm - Ø 108 mm

Ø 15 mm - Ø 54 mm

Eurotubi Pressfitting System in AISI 304 stainless steel is the ideal choice for heating and air conditioning systems, as well as some industrial applications, with the exception of drinking water.
It is widely recommended for open HVAC circuits and can also be used in solar thermal, compressed air systems, chilled water, vacuum and technical fluids. Its excellent corrosion and condensation resistance properties ensure consistent performance even in environments with frequent temperature variations. With its competitive price-performance ratio, it effectively replaces carbon steel when superior protection is required.

CARBON STEEL

Ø 12 mm - Ø 108 mm

Ø 12 mm - Ø 54 mm

Produced to the same quality standards as the stainless steel range Eurotubi Pressfitting System in carbon steel is suitable for the realization of different types of installations where stainless steel is not indispensable. Typical applications are:
- closed circuit heating and cooling systems;
- compressed air and inert gas systems;
- fire sprinkler systems.

The product is certified according to RISE standards for Scandinavian countries, CSTB/QB for French-speaking countries and VdS (Germany) for fire sprinkler systems.

STAINLESS STEEL AISI 316L GAS

Ø 15 mm - Ø 108 mm

Eurotubi Pressfitting System has been also approved in several European countries for use in gas distribution systems, through external above-ground pipes, running inside or outside of the buildings. It offers the highest seal indices (with a maximum pressure of 5 bar and temperature from -20 to +70 °C) and is certified according to German technical specification DVGW G5614. It is suitable for all types of combustible gases, natural or liquid, included in the reference standard DVGW G260.
The sealing ring (o-ring) is made of yellow HNBR, and offers high resistance to ageing and heat.

POWER OF **EXPERIENCE**

Founded in **1953**, grown and known in the pipe bending processing field, over the past 20 years **Eurotubi Europa** has specialized in the production of **Eurotubi Pressfitting System**. Being always oriented towards **innovation** and **specialization**, the Company has experienced a steady growth, becoming one of the major European manufacturers, internationally recognized thanks to the excellent quality of its pressfittings.

CUSTOMER SATISFACTION

4,54

Filled in by 20 top clients, representing 80% of the pressfitting turnover.

PRESSFITTING **ADVANTAGES**

EASY	☑ Very simple assembling technique
FAST	☑ Quick installation
ECONOMIC	☑ Reduction of installation times and costs
CLEAN	☑ No welding or threading required
HYGIENIC	☑ Maximum hygiene
RESISTANT	☑ Guaranteed to last over time
UNATTACKABLE	☑ High resistance to corrosion
NICE-LOOKING	☑ Also suitable for surface installations
ECOLOGICAL	☑ 100% recyclable material
